

# SME COMMAND CENTER

## Quick-Start Guide

*Get your business brain set up in under 30 minutes.*

**Mirembé Muse — Where Transformation Has a Template**

---

## Welcome to Your Command Center

You registered the business. You showed up, sometimes underprepared, sometimes overextended, always trying. This template was built from the inside — by someone who understands the African entrepreneurial context, township economics, SARS compliance, and what it means to build something real with the resources you have right now.

The SME Command Center is not just a Notion template. It is your business brain, externalized and organized. Eight interconnected databases that talk to each other so you spend less time searching and more time building.

---

## What's Inside Your Command Center

-  **Clients Hub** — your entire client relationship database
-  **Projects Tracker** — timelines, deliverables, and payment progress
-  **Revenue Tracker** — every rand in, categorized and searchable
-  **Expenses Tracker** — every rand out, tax-ready
-  **Tasks Command Center** — team tasks linked to projects and clients
-  **Team Directory** — your people, their roles, their documents
-  **Inventory Manager** — stock, equipment, and products
-  **Documents Library** — a home for every important file

## **Before You Begin**

You'll need the following to get started:

- A free or paid Notion account (notion.so)
- The template link from your Mirembé Muse purchase confirmation email
- 10–30 minutes of uninterrupted focus for setup
- Basic information about your business: clients, ongoing projects, team members

⚡ **PRO TIP — BEST ON DESKTOP FIRST** Set up your command center on a desktop or laptop before switching to mobile. Notion's mobile app works beautifully once everything is configured, but initial setup is much smoother on a larger screen.

---

## **Getting Started — Step by Step**

### **1. Duplicate the template into your Notion workspace**

[https://shard-purchase-279.notion.site/SME-COMMAND-CENTER-5011f72e5a63821b840581fdc6174d7f?source=copy\\_link](https://shard-purchase-279.notion.site/SME-COMMAND-CENTER-5011f72e5a63821b840581fdc6174d7f?source=copy_link)

Click the link in your confirmation email. In Notion, click 'Duplicate' in the top right corner. Choose the workspace you want to add it to. The entire system — all 8 databases — will be copied into your account.

### **2. Read the Welcome page first** Inside the template, open 'Welcome — READ THIS FIRST'. It contains important context and setup instructions from the founder. Don't skip this — it's short and worth it.

### **3. Rename the template to your business name** At the top of the main page, replace '[Business Name]' with your actual business name. This makes the system feel like yours immediately.

**4. Add your first client** Open the Clients Hub. Click '+ New'. Fill in your client's name, status (Lead / Active), contact details, and industry. Add as many clients as you have — this database anchors the whole system.

**5. Create your first project** Open Projects Tracker. Click '+ New'. Link the project to a client from your Clients Hub. Add the project value, deadline, and key deliverables.

**6. Log your first revenue entry** Open Revenue Tracker. Add a payment you've received. Link it to the relevant client and project. Watch your financial snapshot on the main dashboard update automatically.

**7. Add your team members (if applicable)** Open Team Directory. Add each person with their role, contact details, and employment type. Once added, you can assign them to projects and tasks.

**8. Bookmark your Command Center** Pin the main SME Command Center page in your Notion sidebar so it's always one click away. This is your business home base.

## Your 8 Modules — What Each One Does

### **Clients Hub**

*Your full client relationship database*

**Key fields:** Client Name, Status, Type, Industry, Revenue, Active Projects, Contract Value, Priority, Last Contact, Next Follow-up

### **Projects Tracker**

*Track every project from proposal to completion*

**Key fields:** Project Name, Client, Status, Start Date, Deadline, Project Value, Paid Amount, Outstanding Balance, Progress %, Deliverables, Team Members

### **Revenue Tracker**

*Every payment in — categorized, dated, and searchable*

**Key fields:** Transaction, Client, Project, Amount, Date Received, Month, Payment Method, Invoice Number, Status, Category

---

### **Expenses Tracker**

*Every payment out — ready for tax season*

**Key fields:** Expense, Amount, Payment Date, Category, Vendor, Business/Personal, Tax Deductible, Recurring, Receipt

---

### **Tasks Command Center**

*Assign, track, and complete tasks with full context*

**Key fields:** Task, Status, Priority, Due Date, Assigned To, Related Project, Related Client, Category, Time Estimate

---

### **Team Directory**

*Your people — roles, documents, and contact info*

**Key fields:** Name, Role, Employment Type, Email, Phone, Start Date, Skills, Salary/Rate, Active Projects, Status

---

### **Inventory Manager**

*Stock levels, equipment, and product information*

**Key fields:** Product/Item, SKU, Category, Current Stock, Minimum Stock, Unit Cost, Selling Price, Supplier, Location

---

### **Documents Library**

*One home for all your important business documents*

**Key fields:** Document Name, Type, Related Client, Related Project, Date Uploaded, Status, File Link

---

# Customizing Your Command Center

## Changing Status Labels

All status fields are customizable. Click any status tag (like ● Active or 🔄 In Progress) and select 'Edit option' to rename or change the color. Make the language work for your industry.

## Adding New Fields

Every database can have new properties added. Click the '+' at the end of a database header row to add a new field. Choose from text, number, date, select, multi-select, and more.

## Creating Custom Views

Each database supports multiple views — Table, Board (Kanban), Calendar, Gallery, and Timeline. Click '+ Add a view' at the top of any database to create filtered or grouped views for your workflow.

## Filtering and Sorting

Use the Filter button to show only what matters right now (e.g., Active clients, High-priority tasks due this week). Use Sort to order by deadline, value, or any other field.

## Your Daily Workflow

| Time                            | Action                                                                                                                          |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------|
| <b>Morning</b>                  | Open Tasks Command Center. Filter by 'Due Today'. Review what's on your plate and what's overdue.                               |
| <b>Client call or meeting</b>   | Update the relevant client in Clients Hub (Last Contact date, notes). If a project was discussed, update its status.            |
| <b>When you receive payment</b> | Open Revenue Tracker. Add the entry immediately. Link to client and project. Your dashboard updates instantly.                  |
| <b>When you pay something</b>   | Open Expenses Tracker. Log the expense with category and tax-deductible status. Keep the receipt reference.                     |
| <b>End of day</b>               | Mark completed tasks as Done. Update project progress percentages. Check if any follow-ups need scheduling in Clients Hub.      |
| <b>Weekly (Friday)</b>          | Review your Financial Snapshot on the main dashboard. Check project deadlines for the coming week. Review outstanding invoices. |

## Tips for Getting the Most Out of Your System

- Always link entries across databases (e.g., link a task to both its project AND its client). This is what makes the system truly powerful — everything connected.
- Use the 'Notes' field generously. This is where context lives. Future-you will thank present-you for writing it down.
- Update statuses in real time, not in batches. A 10-second update when something changes is easier than a 30-minute catch-up session on Friday.
- Set minimum stock levels in Inventory Manager. Notion can display reorder alerts automatically when stock drops below your threshold.
- Use the Documents Library for everything — proposals, contracts, receipts. Give each document a clear name and link it to the relevant client/project.
- Regularly review your Revenue vs Expenses snapshot on the main dashboard. This is your profitability at a glance — use it to make decisions.

---

### 🌻 A Note from Nanda

*"You built this system because you're serious about building something that lasts. Every database connects. Every entry matters. Every update brings clarity.*

*When you feel overwhelmed, come back here. Look at what you've built.*

*See the clients you're serving, the projects you're delivering, the money you're earning.*

*You're not drowning — you're building. And builders use systems."*
